The Chemfile mini-guide would guide you through these steps:

1. **Balanced Equation:** Write and balance the combustion equation: $\text{CH}_4 + 2\text{O}_2 \rightarrow \text{CO}_2 + 2\text{H}_2\text{O}$
2. **Mole Calculation:** Convert grams of CH_4 to moles using its molar mass.
3. **Mole Ratio:** Use the stoichiometric coefficients from the balanced equation to determine the moles of CO_2 produced.
4. **Gram Calculation:** Convert moles of CO_2 to grams using its molar mass.

Example 2: Equilibrium Calculations

Problem: Calculate the equilibrium constant (K) for a reaction given equilibrium concentrations of reactants and products.

The Chemfile mini-guide would emphasize:

1. **Equilibrium Expression:** Write the equilibrium expression (K) for the given reaction.
2. **Substitute Values:** Substitute the equilibrium concentrations into the expression.
3. **Calculate K:** Calculate the value of K, ensuring proper units.

Overcoming Challenges and Troubleshooting

While the Chemfile mini-guide provides a valuable framework, students may encounter certain challenges:
