Even with a simple design, some issues can arise. Here are a few common problems and their solutions:

- **Blank images:** This often points to a depleted battery or expired film. Try replacing the battery or using a fresh pack of film.
- **Light streaks or fog:** This can be caused by dust or debris on the lens or film rollers. Clean the lens gently with a microfiber cloth and check the film rollers for any obstructions.
- **Uneven development:** This can be a result of improper film insertion or environmental factors like extreme temperatures. Ensure the film is correctly inserted and develop the photo in ideal conditions.
- **Camera not functioning:** Check the battery and try replacing it with a fresh one. If the issue persists, it could indicate a more serious internal problem requiring repair.
