Shooting Modes:

The Sony DSC-100V offers a range of shooting modes accessible via the mode dial:

- **Auto:** The simplest mode, ideal for beginners. The camera automatically adjusts settings for optimal exposure.
- **Program (P):** Allows manual adjustments of exposure compensation and other settings while letting the camera manage aperture and shutter speed.
- **Aperture Priority (A):** Lets you choose the aperture, controlling depth of field, while the camera selects the appropriate shutter speed.
- **Shutter Priority (S):** Allows you to set the shutter speed, useful for freezing motion or creating motion blur, while the camera determines the aperture.
